USER INTERFACE AND DESIGN LAB**

Laboratory Observation NoteBook

Name : THARUN KUMAR S

Year/Branch/Section : II/CSE/D

Register No. : 230701393

Semester : IV

Academic Year: 2024-25

Ex. No. : 5b

Date : 29.03.2025

Register No. : 230701393

Name : THARUN KUMAR S

**Simulate the life cycle stages for UI design using the RAD
model and develop a small interactive interface using
OpenProj**

AIM:

The aim is to recreate the lifecycle stages of UI design using the RAD model and design a small interactive interface with OpenProj

PROCEDURE:

Tool Link: <https://sourceforge.net/projects/openproj/>

Step 1: Requirements Planning

1. Gather Requirements:

- Identify key features and functionalities needed for your interface.
- Example: A simple "Login" and "Register" interface with debug logs.

2. Define Use Cases:

- Specify use cases for user login and registration.

- Example: User logs in with valid credentials, user registers with a new account.

Output in OpenProj:

- Create a new project.
- Add tasks: "Gather Requirements" and "Define Use Cases."
- Set durations and dependencies for each task.

Step 2: User Design

1. Sketch Initial Designs:

- Draw rough sketches of the "Login" and "Register" screens on paper.

2. Create Digital Wireframes:

- Use a tool like Figma or Sketch to create digital wireframes.

Example Wireframes:

1. Login Screen: Username field, Password field, Login button, Register link.
2. Register Screen: Username field, Email field, Password field, Confirm Password field, Register button.

Output in OpenProj:

- Add tasks: "Sketch Initial Designs" and "Create Digital Wireframes."

- Allocate time and resources to complete these tasks.

Step 3: Rapid Prototyping

1. Develop Prototypes:

- Use a tool like Axure RP to convert wireframes into interactive prototypes.

2. Test Prototypes:

- Share prototypes with stakeholders for feedback.
- Collect feedback and iterate on the design.

Output:

- Interactive prototypes for "Login" and "Register" screens.

Output in OpenProj:

- Add tasks: "Develop Prototypes" and "Test Prototypes."
- Set dependencies and milestones.

Step 4: User Acceptance/Testing

1. Review Prototype:

- Conduct user and stakeholder reviews.

2. Conduct Usability Testing:

- Perform usability testing and document feedback.

Output:

- Documented feedback and test results.

Output in OpenProj:

- Add tasks: "Review Prototype" and "Usability Testing."
- Track progress and resources.

Step 5: Implementation

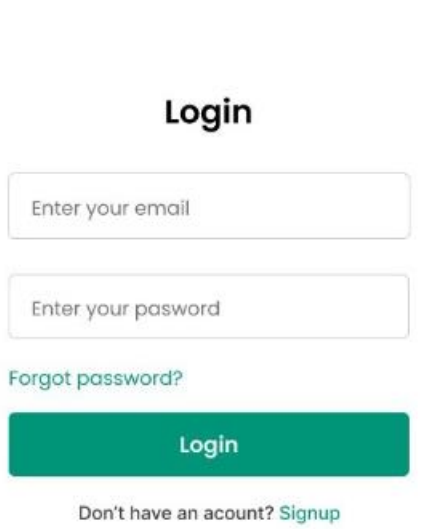

1. Develop Functional Interface:

- Implement final designs and functionalities based on feedback.

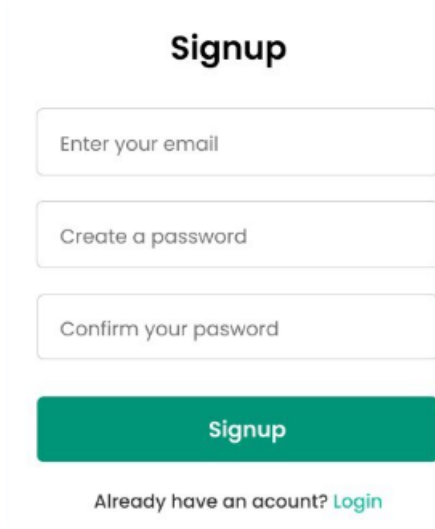

2. Integrate Backend (if required):

- Connect the UI with backend services for tasks like user authentication.

OUTPUT:

The login form is titled "Login" in bold black text. It features two input fields: "Enter your email" and "Enter your password". Below the password field is a link "Forgot password?". A green button labeled "Login" is positioned below the input fields. At the bottom, there is a link "Don't have an account? Signup" in green text.

The signup form is titled "Signup" in bold black text. It features three input fields: "Enter your email", "Create a password", and "Confirm your password". A green button labeled "Signup" is positioned below the input fields. At the bottom, there is a link "Already have an account? Login" in green text.

RESULT:

Hence the lifecycle stages of UI design using the RAD model and design of a small interactive interface with OpenProj has been successfully executed.
